# MixerCV Manual

SV Modular

MixerCV

Figure 1: MixerCV Image

MixerCV is an 8 input mixing module with the addition of CV inputs to automate parameters, as well as Send/Receive functionality on a per-track basis.

Each channel consists of an `INPUT`, LED volume indicator, `VOLUME` adjustment, `PAN` for stereo mixing, `SOLO` for specifying the soloing of a track, and `MUTE` to mute a track.

In addition, `SEND` allows for each track to send to an external effect module, along with `RECV` to receive the output. The `MIX` or "wetness" of this effect can be set with the `MIX` knob, as well as with the `MIX` CV input.
