Figure 1: Bomb

Bomb is a simple hybrid bass drum synthesizer that couples 15 curated bass drum samples with an oscillator providing a wave consisting of a sine and square wave generator. It uses the amplitude envelope calculated from the selected sample as the amplitude for the synthesized wave.

### **Shape**

The *Shape* parameter controls the wave shape of the synthesis engine. The left side is 100% sine wave, and the right side is 100% square wave.

### **Blend**

The *Blend* parameter controls the blend between the sample and the synthesized wave.
