MultiPan Users Manual

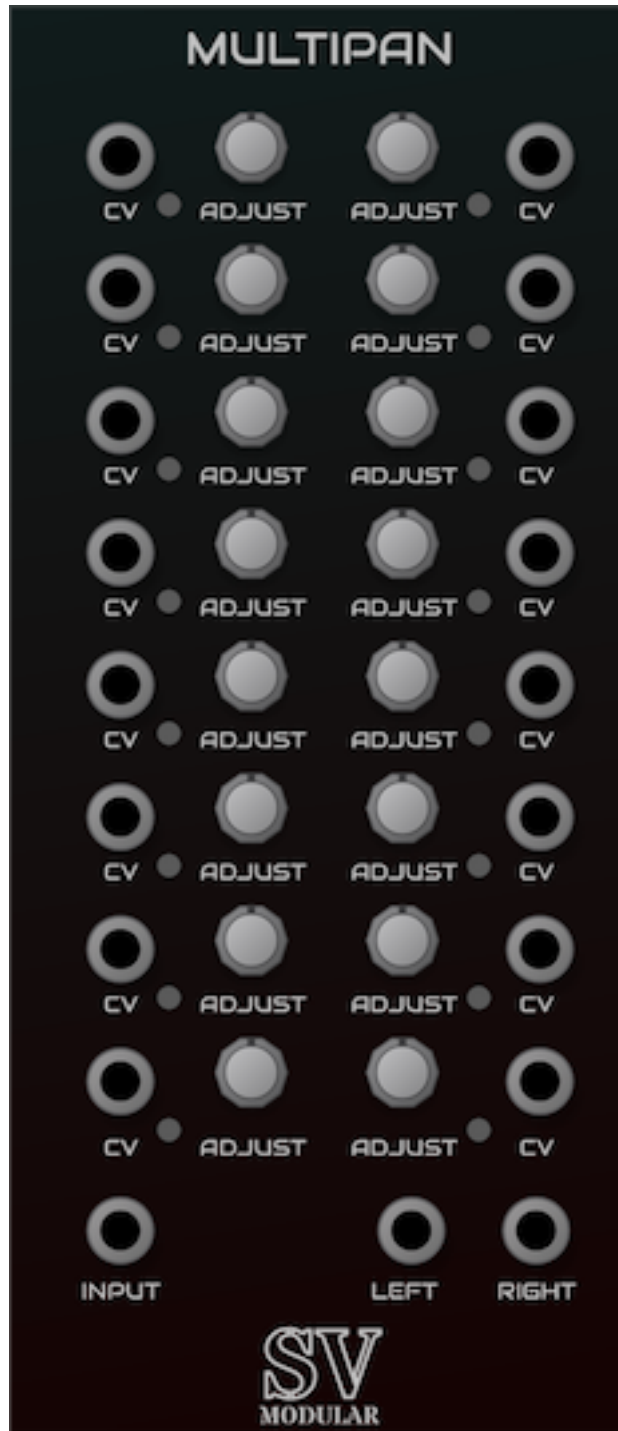

Figure 1: MultiPan

Personal Modules MultiPan is a 16-voice polyphonic panning breakout.

It accepts a polyphonic input of up to 16 channels, allows for adjustment on each channel, combining the channels back as a two polyphonic outputs: left and right.

Input

The input supports up to 16 polyphonic channels.

Left

The left output jack outputs the panned results as a single polyphonic signal. The same number of channels will be output as were input.

Right

The right output jack outputs the panned results as a single polyphonic signal. The same number of channels will be output as were input.

Adjust

The adjust parameter allows you to adjust the channel panning from 0 to 1, where 0 is fully left and 1 is fully right.
